Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

The applicant's information disclosure statement dated 12/29/2003 has been considered and a copy has been placed in the file.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the stabilizing assembly encompassing a lower outer surface of the garnish as recited in claim 1, lines 6-7, and in claim 2, line 4, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

The drawings are further objected to because it is not readily apparent to the Examiner how the elastic run (300) fits within the glass guide as shown in Figure 2. It appears that Figure 2 doesn't clearly show a channel in which the elastic run (300) fits within.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for

Art Unit: 3634

consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1, lines 6 and 7, the phraseology "a stabilizing assembly mounted to the upper end of the glass guide and encompassing a lower outer surface of the garnish" is not readily understood by the Examiner. How does the stabilizing assembly encompass a lower outer surface of the garnish? In claim 2, lines 3-4, the phraseology "the stabilizing assembly that encompasses a lower outer surface of the garnish" is not readily understood by the Examiner (same as in claim 1). How does the stabilizing assembly encompass a lower outer surface of the garnish? In claim 2, line 4, is "a lower outer surface" the same lower outer surface as recited in claim 1, line 7?

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3634

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

As best understood, claims 1 and 2 are further rejected under 35 U.S.C. 102(b) as being anticipated by Grier et al. ('585). Grier et al. ('585) disclose a door glass guide (25 and 44) for a vehicle (30) comprising a glass guide (25 and 44) mounted to a door panel (20), a garnish (22) joined to an upper end of the glass guide (25) to be vertically arranged, an elastic run channel (column 2, lines 19-20) internally secured to the glass guide (25 and 44), and a stabilizing assembly having a contact member and connector (70, 72 and 74) which contacts an upper end of the glass guide.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. patent to Sakaguchi et al. disclose a guide assembly similar to that of the applicant's invention. U.S. patent to Nishikawa et al. disclose a guide assembly similar to that of the applicant's invention. U.S. patent to Tokui et al. disclose a guide assembly similar to that of the applicant's invention.
